

Henshaw Inflatables

World leaders in inflatable tube technology

Developed for the Super Yacht Market these Inflatable Jet Ski Docks provide a secure and safe platform to dock the latest range of jet skis that rely on a bilge pump whilst the engine is running.

The construction consists of a base manufactured from an inflatable tube structure made in Hypalon coated fabric and the top is manufactured in a double walled Drop Stitch fabric with a thickness of 100mm. The top surface has a non slip finish and incorporated into the platform are integral inflatable supports.

The whole platform will deflate into a compact package for stowage on board and can be inflated with either a vessel's airline or a 12v or 24v pump.

Two sizes are manufactured – a Single Jet Ski and a Twin Jet Ski Version.

JET SKI PLATFORM

SPECIFICATION:

Bottom tube construction in 1300gsm (1100 DTex) Hypalon coated fabric

2 x C7 inflation/deflation valves

Top platform in double walled Drop Stitch Hypalon coated fabric

Non slip surface

2 x Moulded grab handles

4 x stainless steel 'D' ring patches for anchoring or tie off points

TYPICAL SIZES

(Sizes are for the internal width between the beams)

Size	Weight	Packed deflated size(approx)
Single	35kgs	120 x 50 x 40cms
Twin	54kgs	120 x 65 x 46cms
